

LEARNING WELL WITH AI

Audio Transcript

EDS 153: Design of Educational Multimedia Materials

Slides 1–20 · Main narration · Interaction reveals · Feedback

Accessible text alternative for the prerecorded narration

How to use this transcript

- Use the slide number and title to find the narration that accompanies each screen.
- Sections labelled Main narration correspond to the primary audio button on the slide.
- Card, tooltip, pop-up, reveal, and feedback sections correspond to audio that becomes available after an interaction.
- Visual reference lists that do not have narration are intentionally omitted.
- No meaningful non-speech audio is used; therefore, no additional sound descriptions are required.

Language: English.

Voice-over disclosure: Voice-over was generated using CapCut text-to-speech with the Alex voice. Narration scripts were developed and reviewed by the project team.

Pronunciation note: The term “GenAI” is pronounced “Gen A I” in the recorded narration.

Slide 1 — Learning Well with AI

Main narration

Welcome to Learning Well with AI. In this short guide, you'll explore how to use generative AI thoughtfully for learning while keeping your own thinking and judgment at the center.

When you're ready, select Start. On the following slides, use the arrow on the right to move forward at your own pace.

Slide 2 — Opening Reflection

Main narration

Your teacher allows generative AI for this activity, but you must still be able to explain every part of your work.

What would you normally ask GenAI to do?

Your choices are: write the assignment for you; give you an outline you can build from; help you understand the task; or not use GenAI.

Select the option closest to what you would normally do. There is no feedback yet. We'll revisit this decision later.

After choosing, use the right arrow when you're ready to continue.

Slide 3 — Learning Objectives

Main narration

By the end of this module, you'll be able to do three things.

First, decide when GenAI can support learning.

Second, use GenAI without replacing your own thinking.

And third, recognize what makes a better prompt.

Slide 4 — How GenAI Can Support Learning

Main narration

GenAI can support learning without doing everything for you.

It can help you get started. It can help you understand something differently. It can also help you organize or improve your work.

Select the arrow on each card. After a card flips, select Play card audio to hear its message.

Get Started card

GenAI can help you get started. But you still need to choose what fits your goal.

Understand Something Differently card

GenAI can explain something in a different way. But you still need to check your own understanding.

Organize or Improve Your Work card

GenAI can suggest ways to organize or improve your work. But you still need to make the final decisions.

Slide 5 — Support the Process or Replace the Thinking?

Main narration

Imagine that you are working on an essay.

Where could GenAI support your work? And where do you need to do the thinking yourself?

You have four actions to sort. Could GenAI help you brainstorm possible ideas? Could it suggest ways to organize those ideas? Should it write the whole essay for you? What about suggesting improvements to your draft?

Drag each action into the box where you think it belongs. The first box is for ways GenAI can support the process. The second box is for decisions and learning that must remain your responsibility.

Finish the activity first. Then select Play feedback audio.

Activity feedback audio

GenAI can support your writing by helping you brainstorm and organize your ideas and by suggesting possible improvements to a draft. You must decide which suggestions actually improve your work and complete the final thinking and writing yourself, so use GenAI to support your learning rather than replace it.

Slide 6 — How You Ask Matters

Main narration

How you ask matters, and in this example you need help reviewing electromagnetism for a science exam. Prompt A asks GenAI to explain electromagnetism for the exam, while Prompt B identifies you as a Grade 12 student, asks for simple language, and requests an everyday analogy, so select the prompt you would choose to use.

Feedback

Prompt B is more useful because it identifies the learner, names the topic, asks for simple language, and describes the kind of explanation that would help. A useful prompt can improve the response, but it does not guarantee that the information is correct, so you still need to check what GenAI provides.

Slide 7 — Explore the Parts of a Useful Prompt

Main narration

Let's explore what makes this prompt useful, which says that the learner is a Grade 12 student reviewing electromagnetism and wants a simple explanation with an everyday analogy. Select each numbered point to open its explanation, then select the audio button to hear what that part tells GenAI.

Tooltip 1

This part identifies who the response is for, which helps GenAI adjust the explanation to the learner's level.

Tooltip 2

This part identifies what the learner is studying, which gives GenAI the topic and helps keep the response focused.

Tooltip 3

This part explains how the learner wants the idea presented, which tells GenAI to avoid overly technical language.

Tooltip 4

This part describes what would help the learner, which tells GenAI to include a relatable example that may make the idea easier to understand and remember.

Slide 8 — Three Things That Make a Prompt Useful

Main narration

Three things can make a prompt more useful, which are being clear about what you need help with, including relevant details, and describing the kind of response that would help. Select the arrow on each card to see more information, then select its audio button to hear the explanation, and remember that a better prompt is not necessarily a longer prompt.

What You Need Help With card

Be clear about the task or question so GenAI can focus on what you actually need.

Relevant Details card

Provide information that helps GenAI understand your situation, but include only the details that are relevant to your request.

Response Type card

Describe how you want the answer explained or presented, such as using simple language, a short list, or an everyday analogy.

Slide 9 — Prompt Practice

Main narration

Imagine that you are studying for a history exam and need help understanding a concept from your notes. Prompt A identifies you as a Grade 12 student, asks about the main causes of the Philippine Revolution, requests simple language, and asks for three key points to remember, while Prompt B requests a thorough and detailed explanation, so select the prompt you think would be more useful.

Step 2 instruction

Now select all the features that make the prompt useful, including whether it clearly states what help is needed, provides relevant details, or describes the desired response. Decide whether using more words or sounding more formal also makes a prompt useful, then select Send to check your choices.

Final feedback

Prompt A is more useful because it provides relevant context, clearly states what help is needed, and describes the desired response. A prompt is not automatically better because it contains more words or sounds more formal, because what matters is whether it gives GenAI useful direction.

Slide 10 — A Confident Answer Still Needs Checking

Main narration

A confident answer still needs checking, because even a clear and well-written response may contain errors or unsupported information. Read the response about photosynthesis, then decide whether you would use it because it looks good, check it first, or question whether something may be wrong.

Yes feedback

A convincing answer is not always correct, because it may contain errors, leave out important context, or include claims without reliable support, so check important information before using the response.

Maybe feedback

Good judgment, because clear and confident writing is not evidence of accuracy, so check important claims before using the response.

No feedback

Good catch, because GenAI can sound convincing even when its information is inaccurate or incomplete, so check the response before using it.

Slide 11 — What Should You Check?

Main narration

Before using an AI response. Pause and check three things.

Is the information accurate?

Is it supported by trustworthy evidence?

And does it fit your question and task?

Select each icon to learn more.

Accuracy card

First. Check its accuracy.

Ask whether the claim agrees with reliable evidence.

Support card

Next. Check its support.

Ask whether you can identify trustworthy evidence or sources for the claim.

Fit card

Finally. Check its fit.

Ask whether the response answers your actual question and suits the task.

Slide 12 — Don't Let GenAI Grade Itself

Main narration

You are not sure whether one of the claims is true. Do not ask GenAI to judge its own answer.

Instead. Verify the claim using a source that is independent from the original response. Select each source category to examine your options.

Academic Sources pop-up

Academic sources include Google Scholar. Peer-reviewed journals. And research databases.

Official Sources pop-up

Official sources include government websites. UNESCO. The World Health Organization. DepEd. And the Philippine Statistics Authority. Choose an organization that is relevant to the topic.

Books and Textbooks pop-up

You can consult established textbooks and resources from a trusted library.

Experts and Institutions pop-up

You can also check universities. Professional organizations. Or recognized experts in the field.

Independent Sources pop-up

Independent sources can include reputable news organizations. Fact-checking organizations. Or another reliable source that did not produce the original claim.

Slide 13 — You Still Decide

Main narration

After checking the claim. You still need to decide what to do with the GenAI response. Select each action to learn when it may be appropriate.

Use It reveal

Use the response when reliable evidence supports it and it fits the task.

Revise It reveal

Revise the response when you can correct the problem and add reliable information.

Check It reveal

Check the response further when you need more evidence before making a decision.

Reject It reveal

Reject the response when reliable evidence contradicts its claim.

Takeaway audio

The correct action depends on the evidence. Your purpose. And how serious the problem is.

Slide 14 — Responsible-Use Check

Main narration

Which actions demonstrate responsible GenAI use? Select every action that you believe applies. Then submit your choices. A green check shows an action that demonstrates responsible use. A red X shows an action you should reconsider.

Slide 15 — Four Habits You Already Practised

Main narration

You have already practised four habits for learning well with AI. Identify. Guide. Check. And choose. Select the circular arrow on each card to reveal what you did.

Identify card

You decided when GenAI could help.

Guide card

You thought about what information it needed.

Check card

You checked its response instead of automatically trusting it.

Choose card

You decided what to do with the result.

Slide 16 — Transparency and Ownership

Main narration

A learner used GenAI to brainstorm and improve an outline. What should happen before the work is submitted? Select each choice to examine the feedback.

Review feedback

Good choice. Check the facts. Correct any errors. And revise the work using your own judgment before submitting.

Disclose feedback

Good choice. Always acknowledge assistance from GenAI. Transparency helps protect academic integrity.

Own the Work feedback

Good choice. You remain responsible for the final work and should be able to explain every part of what you submit.

Submit Unchanged feedback

Whoops. Try again. Submitting output from GenAI without changes skips verification and learner judgment. Review it. Revise it. Disclose its use when required. And take ownership of the final result.

Slide 17 — The Four Ds Work Together

Main narration

The four Ds work together to guide your decisions. Delegation means deciding what you should ask. Description means adding the context and information the tool needs. Discernment means checking whether you can trust the response. And diligence means deciding what you should do next. This is a cycle. You can revise your approach and try again whenever necessary.

Slide 18 — Final Check. Part One

Main narration

Imagine that you need to explain an important concept but are unsure how to organize your ideas. First. Decide how GenAI should help. Then choose the more useful prompt. Select an answer under each question to receive feedback.

Best Use. Stronger-choice feedback

Good choice. GenAI can support your understanding and help you organize your ideas. But you should still do the thinking and produce the final explanation.

Best Use. Weaker-choice feedback

Try again. Asking GenAI to complete and submit the entire task would replace the thinking and learning that you need to practise.

Prompt. Stronger-choice feedback

Good choice. This prompt explains who you are. What you need. And what the tool should and should not do. Relevant context makes the response more useful while keeping you responsible for the final answer.

Prompt. Weaker-choice feedback

Try again. This prompt is too broad to guide a useful response. Add your purpose. The kind of support you need. And any important limits.

Slide 19 — Final Check. Part Two

Main narration

Now decide what you should do with the response. Should you check the information against reliable sources. Review whether it fits your task. And revise it as needed? Or should you copy it because GenAI has already provided an answer? Select your choice to receive feedback.

Stronger-choice feedback

Good choice. Check important claims against reliable sources. Review whether the response fits your purpose. Follow any requirements for acknowledging the use of GenAI. And take responsibility for the final work.

Weaker-choice feedback

Try again. A response from GenAI is not automatically accurate or appropriate. Review and revise it before deciding whether and how to use it.

Slide 20 — Wrap-up. Next Step and Resources

Main narration

Great work. You are now ready to use GenAI more thoughtfully and responsibly. Remember to recognize when it can help and where its limitations begin. Give it clear instructions and relevant context. And always keep your brain in the loop by checking. Deciding. And taking responsibility for what you use. You can explore the resources and references for further learning. Then select Finish. And take these habits into your next learning task.
